# Contents of a Comprehensive Plan

## NINE ELEMENTS OF A COMPREHENSIVE PLAN

1. Issues and Opportunities
2. Housing
3. Transportation
4. Utilities & Community Facilities
5. Ag, Natural & Cultural Resources
6. Economic Development
7. Intergovernmental Cooperation
8. Land Use
9. Implementation

# Contents of a Comprehensive Plan

## 1. Issues and Opportunities Element

### Background Information:

- Population Forecasts
- Household Forecasts
- Employment Forecasts
- Demographic Trends
- Age Distribution
- Education Levels
- Income Levels
- Employment Characteristics

# Data for a Comprehensive Plan

## Data for the Issues and Opportunities Element

### ☯ Population

- Total population
- Race and Ethnicity
- Foreign born
- Sex
- Age Distribution
- Population projection
- Households projection

### ☯ Education

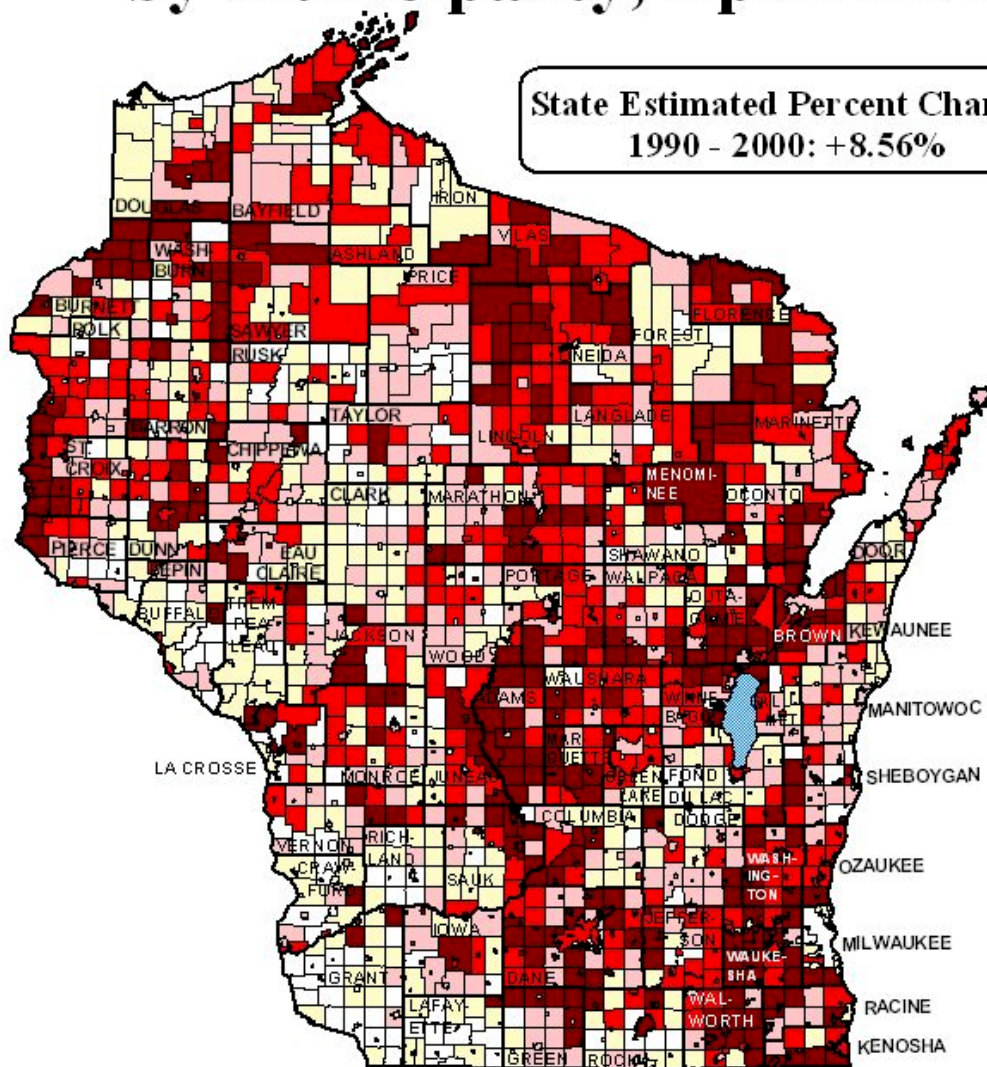

### ☯ Income

### ☯ Poverty Status

## Estimated Percent Population Change in Wisconsin, by Municipality, April 1990 - January 2000

**State Estimated Percent Change,  
1990 - 2000: +8.56%**

## Percent Change 1990-2000

- |   |  |
|---|--|
|  | Loss or no change                              |
|  | 0.01 - 4.10% (1st quartile of positive values) |
|  | 4.11 - 7.71% (2nd quartile)                    |
|  | 7.72 - 13.06% (3rd quartile)                   |
|  | 13.07% or greater (4th quartile)               |

Top Ten Municipalities  
Greatest Estimated Percent Growth  
(minimum 250 persons in 1990)

Municipality	County	Change
Cottage Grove village	Dane	161.54%
Buchanan town	Outagamie	103.34%
Brockway town	Jackson	96.97%
Ledgeview town	Brown	83.35%
Jackson village	Washington	82.26%
Sherwood village	Calumet	67.03%
Nashotah village	Waukesha	66.14%
Holmen village	La Crosse	61.43%
Sussex village	Waukesha	59.99%
Theresa village	Dodge	58.75%

Center, October 2000

# Contents of a Comprehensive Plan

## 2. Housing Element

### **Housing Stock Information:**

- Age Characteristics
- Structural Characteristics
- Value Characteristics
- Occupancy Characteristics

### **Identify policies and programs that:**

- Promote development of housing for residents.
- Provide a range of housing choices that meet needs of persons of all income levels, of all ages groups, and persons with special needs.
- Promote the availability of land for development or redevelopment of low-income and moderate-income housing.
- Maintain or rehabilitate local governmental unit's existing housing stock.

# Data for a Comprehensive Plan

## Data for the Housing Element

Number of Housing Units by Type

Housing Unit Estimate, Housing Tenure

## Data Available From GIS Services

All data is in ESRI shapefile format. It is projected to Wisconsin Transverse Mercator (WTM) 1983(91). Specific information on this projection can be obtained by clicking [here](#).

### CD-1 -- TIGER2000™ Wisconsin

The CD contains:

12 statewide TIGER™ layers for Wisconsin, based on the TIGER2000 files. These are the same files available individually from this [site](#).

The layers include: county boundaries, municipal boundaries, and Census geography, including block, block group, and tract. A [fuller description](#) (PDF format) and a [general description](#) is available.

### CD-2 -- TIGER2000™ Wisconsin counties

The CD contains:

13 countywide TIGER™ layers for each of the 72 Wisconsin counties, based on the TIGER2000 files. These are the same files available by county from this [site](#).

The layers include: county boundaries, municipal boundaries, and Census geography, including block, block group, and tract. A [fuller description](#) (PDF Format) and a [general description](#) is available. These are the same layers as in CD-1 (above) plus the TGR layer.

## TIGER 2000 Download Files

TIGER 2000 files for Wisconsin are available via CD-ROM or downloading. To order the TIGER 2000 data CD, visit the [GIS Service Center](#) website. To download the data, read the information below, before clicking on the data download links.

There are 13 files, or layers, available for each county, and 13 shapefiles available in statewide format. A [complete description](#) (PDF Format) or a [brief description](#) is available. The files are in zip file format, which users may download the necessary software to unpack these files from the WinZip® web site (<http://winzip.com/>).

Once unpacked, all files are in ESRI shapefile® format and are designed for use with the processed [Census files](#) also available from this Department. All shapefiles are referenced to the [Wisconsin Transverse Mercator](#) coordinate system, with a datum of NAD83(91).

A complete FGDC metadata document in HTML format is included with each downloadable file. Please review the metadata prior to use to determine data suitability.

# Administrative Areas and Infrastructure

## **CD's of geospatial data available through DOA**

- School district boundaries (Census)
- Cooperative Education Service Agency (CESA) boundaries (Census)
- Legislative districts (Based on 2002 Redistricting)
- Telephone Service territories (Public Service Commission)
- Area Codes Airports (U.S. Department of Transportation)
- Hospital and nursing homes (Dept of Health and Family Services)
- Shipping ports (U.S. Army Corps of Engineers)
- Railroads (WI Dept of Transportation)
- Business locations; 140,000 locations (Dept. of Workforce Development)

including block, block group, and tract. A [fuller description](#) (PDF Format) and a [general description](#) is available. These are the same layers as in CD-1 (above) plus the TGR layer.

### CD-3 - Administrative Areas and Infrastructure in Wisconsin

The CD contains a collection of files, including:

- School district boundaries (unofficial);
- Cooperative Education Service Agency (CESA) boundaries
- Legislative districts, including the State Assembly, State Senate, and U.S. House districts (based on 2002 redistricting)
- Telephone Service territories (from the state Public Service Commission)
- Area Codes
- Airports (point coverage from U.S. Department of Transportation)
- Hospital and nursing homes (point coverage from WI Dept of Health and Family Services)
- Shipping ports (point coverage from U.S. Army Corps of Engineers)
- Railroads (from WI Dept of Transportation)
- Business locations; 135,000 business locations in the state (based on a November 2001 file from WI Dept of Workforce Development)

#### Attributes associated with each layer.

Additional files are included to provide the user with a point of reference, although all of these files are designed for use with the data sets found on CD-1 above, and users are encouraged to obtain that CD for use with these datasets.

Reference files include: county and municipal boundaries; federal and state highways.

Total of all files on the CD is approximately 100 megabytes

[Public Land Survey System \(PLSS\) Index](#)

## **WTM83/91 Geo-referencing System**

The Wisconsin Transverse Mercator coordinate system is based on the state's current high resolution reference network – the 1991 adjustment to the North American Datum of 1983 (WTM83/91).

- [Rationale for Migration to WTM83/91 for DNR Geographic Data](#)
  - [WTM83/91 Parameters](#)
- 

## **Rationale for Migration to WTM83/91 for DNR Geographic Data**

For the purposes of data integration, there are significant advantages in making all agency geographic data available for internal use in a single statewide coordinate system. This approach is intended to better enable DNR GIS users to integrate agency data sets. It also enables integration of statewide vector data with the accumulating raster data, including DRGs, DOPs, and WISCLAND land cover data.

For this single geographic referencing system, the DNR has chosen a statewide Wisconsin Transverse Mercator projection/coordinate system, based on the current high-resolution reference network (the 1991 adjustment to the North American Datum of 1983). A shorthand term for the version of WTM based on the 1991 adjustment to NAD83 is "WTM83/91." The WTM coordinate system parameters to be used in conjunction with NAD83/91 are the same as those specified for use with NAD83, and are identified below.

**Wisconsin Land Information Program****2003 Assessment Survey**[Home](#)[Results](#)[Login](#)[Logout](#)[Feedback](#)[Contacts](#)

## *Overview of Survey*

### *WLIP Year 2003 Annual Survey*

The purpose of the [Wisconsin Land Information Program \(WLIP\)](#) Annual Survey is to provide a periodic assessment of the status, progress, and benefits of the WLIP to each of Wisconsin's 72 counties, the Land Information Board and other interested parties.

You will find that the 2003 Survey follows the format and structure of the [2002 survey](#). By tracking the same questions over time, users of the Survey are able to not only determine the status of the WLIP today, but understand how it has changed from prior years, seeing changes in things such as software, type and extent of data available, and types of applications that use the data.

Most previous year's responses are carried forward, with the exception of some comment sections

Overall, the same 25 sections of the Survey remain. At the end of each section you will find a "submit" option. By pressing this button, you are indicating that you have updated that section and are submitting your update. We will be tracking the status of completion for each county, and when all 25 sections have been "submitted", the Survey is considered "DONE" complete. However, you are able to review any section, and change your response or make additional changes. Once all counties have completed and submitted all 25 sections, the Survey will be "closed" at which time further changes cannot be accepted and analysis will begin. You will be given ample notice. A notice will go out to each LIO prior to the Survey being "lockedclosed" for the year.

Before completing the survey, you may want to review the ["Instructions Document"](#) or proceed directly to the the Survey. You may want to BookMark that page to make it easier to get to as you complete the Survey. The password for your county has been sent to you. You may change it at any time from within the Survey.

If you have questions or /concerns about the survey, a [list of contacts](#) is provided.

# UW Applied Population Lab's WisStat

---

**WISSTAT** contains thousands of demographic and economic variables for the state of Wisconsin, its counties and municipalities.

The sources of the data include the U.S. Census Bureau and various State and Federal agencies.

<http://www.wisstat.wisc.edu>

**Help**

**Geography**

**Tables**

**View/Download**

**Analysis Tools**

**Start Over**

## Step 1: Select a geography.

Click the geography tab. Select a level of geography that you want to select from. Your choices include **State, Counties, Places, MCD's, Tracts, and Block Groups**. When selecting MCD's, Tracts and Block Group you will also be shown a drop down box with counties to choose from. Once you have selected a level of geography and if needed a county, you will be shown a page with your choices of geographies to add. Simple check the checkbox next to each geography that you want to add and hit the **Add the Geography** button. Each geography that was checked will be added.

[Click Here for a Demo of "Selecting a Geography"](#)

## Step 2: Select a Table.

Click the Tables tab. You can look at all the tables in the database by clicking the **List all tables button**. You can also use one or more of the filter dropdown boxes: **Source, Keyword, A Second Keyword, Year, Year Range or Subject**. For example, if you were looking for tables dealing with the subject of Population but, only wanted ones that dealt with age you would select **Population** from the subject dropdown box and age from the **Keyword** dropdown and hit the button **Get Tables**.

For a preview of the table structure click the **View button**. A new window should appear with the layout of the table. To add tables check the box for the table or tables and press the button **Add the Table(s)**.

[Click Here for a Demo of "Selecting a Table"](#)

## Step 3: View your Selections

## Internet Map Servers in Wisconsin: Updated November, 2003

The following sites are given as examples of current internet mapping service development efforts.

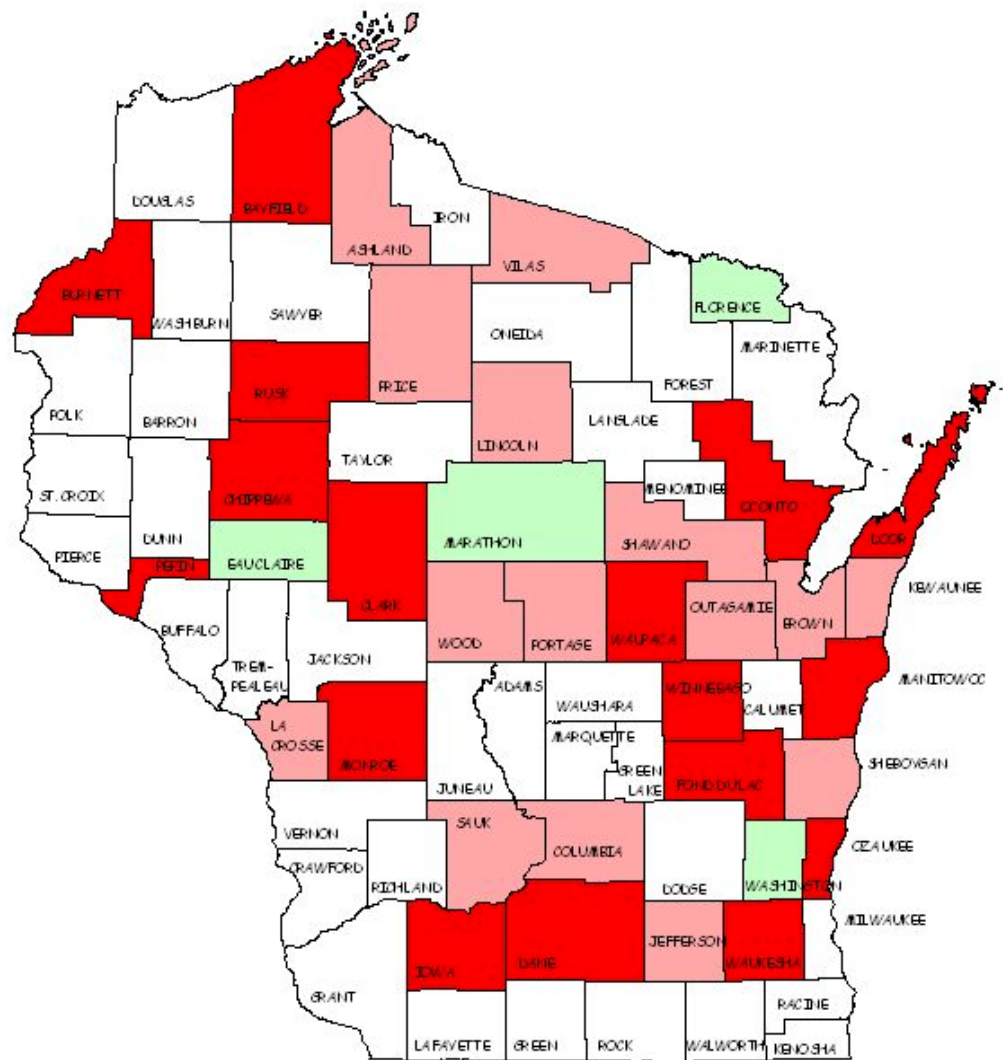

[http://www.doa.state.wi.us/docs\\_view2.asp?docid=1741](http://www.doa.state.wi.us/docs_view2.asp?docid=1741)

County and municipal web mapping sites in Wisconsin can also be accessed at a site maintained by the University of Wisconsin Sea Grant Institute (<http://coastal.lsc.wisc.edu/wisconsin-ims/wisconsin-ims.htm>)

County sites are also linked through the Wisconsin Land Information Clearinghouse County Catalog. (<http://wisclinc.state.wi.us/datadisc/countycat.html>)

WLIS will exemplify many of the best features found here. For example, the Wisconsin Metadata Explorer (<http://wlis.dnr.state.wi.us/explorer/explorer.jsp>) could be populated with "metadata lite" about each service. Such elements would include: Publisher, Content Title, Coverage Area, Content Type, Content Theme Keywords.

## Wisconsin County and Municipal Web Mapping Sites

Many county and municipal governments in Wisconsin are developing web mapping sites. County web mapping sites can be accessed by clicking on the red counties on the map below. They will open in a separate browser window. Counties with web mapping sites in development are colored in pink and counties with intranet or subscription only web mapping sites are rendered in green.

## **Wisconsin Land Information System Pilot Project**

In 2002, DOA requested that DNR assist with developing and implementing some of the technological pieces needed for implementation of a Wisconsin Land Information System (WLIS). The concept and outline for WLIS was developed by a project team formed by the Wisconsin Land Council and Wisconsin Land Information Board. The WLIS project team included participants from state and local government, regional planning commissions, and the private sector.

The long-term vision for WLIS identified creation of a statewide, web-based, distributed system easily accessible to the public with links to Wisconsin land-related data and information through indexing or retrieval. It would become a technical and organizational mechanism for accessing and transferring land information, supporting integrated and aggregated views of state and locally produced data, capitalizing on data already created by state agencies and local governments and other sources such as federal sources. Among other benefits, WLIS should be a means of supporting land management decision-making activities, including comprehensive land use planning.

This FY03/04 cooperative project between DOA and DNR is focused on developing and implementing selected technological Internet GIS components. These components can be considered "building blocks" which will support the WLIS initiative. Efforts build upon and improve DNR's capabilities, and demonstrate feasibility of the functions identified for WLIS.

### Select PLSS Q-Q Sections

## Extract GIS Layer

The "extract" tool allows you to locate an area of interest, and then download a ESRI Shapefile for that area. Shapefiles can be used in popular GIS software packages such as ArcView, ArcMap, or ArcExplorer.

1. Locate your area of interest using the map navigation tools (zoom in, zoom out, pan).
2. From the list below, select the layer that you wish to extract to a shapefile: \*

Layer Name  
24K Open Water Refresh List

3. Press the OK button.

OK

\* Please note: A layer must be visible on the map before it can be extracted to a Shapefile. Also, after you zoom in, it will be necessary to click on "refresh list" to refresh the list of extractable layers.

### Content Citation:

**Title of Content:** [Wisconsin DNR WebView](#)

**Type of Content:** Live Data and Maps (ArcIMS Image Service)

**Content Publisher:** Wisconsin Dept. of Natural Resources (DNR)

**Publication Place:** Madison, WI

**Publication Date:** October 2003

### Content Description:

**Content Summary:** DNR WebView is an ArcIMS mapservice containing the most commonly requested DNR geographic data layers. The WebView service may be accessed through commercial client applications such as ArcMap or ArcExplorer, custom client applications developed with ArcObjects, or through custom-designed web applications.

**Content Purpose:** WebView provides remote access to datasets that might otherwise be too large and/or impractical to download and use in their entirety.
